

Antimicrobial Resistance is one of the greatest health threat humanity faces today. It has disrupted the SDG agenda 2030.

Antimicrobials, including antibiotics antifungals antivirals and antiparasitics are the backbone of modern medicine. They allow us to treat deadly infections successfully and make essential health services safer for everyone.

However, the overuse and mis-use of antimicrobials are the main drivers of drug resistant pathogens

Health Department Khyber Pakhtunkhwa has established AMR control program in the province. The department is celebrating World antimicrobial awareness week 2021 as an opportunity to draw attention to this global health challenge and to the program in the province. We need people and professionals to SPREAD AWARENESS, STOP RESISTANCE by practicing responsible use of antimicrobials and by following the advice of healthcare providers. Play your part in our shared responsibility to keep these drugs working for everyone everywhere
